
Automatic Folding Container for Airports in North Asia

Why should airports use automated container unloaders?

With minimal operator intervention required, the Automated Container Unloader enhances operational efficiency and reduces labor costs. By automating the unloading process, airports can streamline their operations and allocate resources more effectively, ultimately improving overall productivity and performance.

What is automated container unloading?

Our Automated Container Unloading system streamlines the baggage unloading process and minimises the need for operator intervention while maximising productivity. By leveraging automation technology and innovative design, our Automated ULD Container Unloader ensures that bags are efficiently removed from ULDs with precision and speed.

What are Air Cargo Systems?

AIR CARGO Systems and individual components for cost-efficient transportation, storage and build & break of unit load devices and consignments. ULD HANDLING Autonomous and intelligent transportation of ULDs with automated guided vehicles. Intelligent solutions for efficient baggage sorting and process-reliable loading of baggage in ULDs.

What is a fully automated cargo terminal?

As integral element of fully automated cargo terminals, our new AGVs provide the link between import/export areas and build & break workzones as well as automated storage and retrieval systems. In manual terminals, they can enable cargo handlers to take the first step towards the benefits of automation.

Asia is home to some of the world's largest and busiest seaports. These serve as pivotal hubs in the global supply chain. These major Asian ports ...

Automatic Logistics System We offered reasonable and comprehensive system planning design solutions and completed sets of professional equipment to many domestic and international ...
