## Energy storage 60 kWh charging pile

How effective is the energy storage charging pile?

The energy storage charging pile achieved energy storage benefits through charging during off-peak periods and discharging during peak periods, with benefits ranging from 699.94 to 2284.23 yuan (see Table 6), which verifies the effectiveness of the method described in this paper. Table 6.

How to reduce charging cost for users and charging piles?

Based Eq. ,to reduce the charging cost for users and charging piles,an effective charging and discharging load scheduling strategyis implemented by setting the charging and discharging power range for energy storage charging piles during different time periods based on peak and off-peak electricity prices in a certain region.

How does the energy storage charging pile"s scheduling strategy affect cost optimization?

By using the energy storage charging pile"s scheduling strategy,most of the user"s charging demand during peak periods is shifted to periods with flat and valley electricity prices. At an average demand of 30 % battery capacity,with 50-200 electric vehicles,the cost optimization decreased by 18.7%-26.3 % before and after optimization.

Do energy storage charging pile optimization strategies reduce peak-to-Valley ratios?

The simulation results demonstrate that our proposed optimization scheduling strategy for energy storage Charging piles significantly reducesthe peak-to-valley ratio of typical daily loads,substantially lowers user charging costs,and maximizes Charging pile revenue.
