# How big are rooftop solar panels

How many solar panels can fit on a roof?

To determine how many solar panels can fit on your roof, you'll first need to know the size of a solar panel. There's no standardized chart for this, but as an example, a 5kW solar system consists of 50 100-watt solar panels.

How much space does a rooftop solar system take up?

So a typical, residential rooftop solar system with 25 panels would take up about 375 square feet of roof space, but the size of your specific system will depend on your energy consumption. If you have high energy usage throughout the year, you'll likely end up with more panels, and vice versa.

What is a solar panel size?

Solar panel size is measured in watts (W) and indicates how much electricity the panel can produce under standard test conditions. Here's the key distinction every homeowner should understand: Most residential solar panels in 2025 come in three main configurations:

How much do solar panels weigh on a roof?
