# Inverter battery replacement

Do inverters need batteries?

For most residential and small commercial setups, the traditional battery and power inverter combo is the preferred choice to ensure continuous power supply during blackouts. So, while some inverter types do not require batteries, if your priority is uninterrupted backup power, investing in a quality battery in inverter system is essential.

What is an inverter battery?

An inverter battery is a specially designed energy storage solution that powers an inverter during electricity outages. Unlike automotive or starter batteries--which provide short bursts of high current to start engines--inverter batteries are built for deep-cycle performance, meaning they release a steady amount of energy over a longer duration.

How long do Inverter Batteries last?

Battery backup duration varies based on battery capacity, load, and battery health. A typical 150Ah tubular inverter battery running a moderate load of lights and fans can last between 4 to 6 hours. Heavy appliances or higher load will reduce this time.

What should I do if my power inverter is not working?

Use Energy-Efficient Appliances: Replace older, power-hungry appliances with energy-efficient models that draw less power from your battery and power inverter system.  
Regularly Monitor Battery Voltage: Use a voltmeter or inverter display to check battery health and avoid deep discharges.
