
Inverter pure sine wave AC

What is a pure sine wave inverter?

A pure sine wave inverter is a type of power inverter that converts DC power from batteries or other DC sources into AC power.

Why do you need a sine wave inverter?

Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level. A pure sine wave inverter also saves you money, as it's much more efficient than the older, jagged wave inverters.

When do I need a pure sine wave inverter generator?

A pure sine wave inverter generator is necessary when you need to power sensitive electronics. Some examples include running laptops, desktop computers, gaming consoles, audio equipment, or medical devices that require a stable and clean power supply.

How much does a sine wave inverter cost?

\$100-\$500 range: This is what you're likely to pay for most pure sine wave inverters on the market. These usually generate between 1,000 and 2,000 watts, so you can use one to power appliances in your off-grid cabin, RV, or boat. **\$500 and above:** This kind of money will get you a heavy-duty inverter with a power capacity from 3,000 to 12,000 watts.
