
Is it okay to put a battery cabinet on the anti-static floor

Can I store my battery on a concrete floor?

This one is an often heard 'old wives tale'. It used to be that battery cases were made of inferior material such as hard rubber, or even tar. This material would develop micro cracks over time and become porous, and left on wet ground or damp concrete would begin to self discharge.

Can a plastic cased battery be left on a concrete floor?

As I have personally seen my own plastic cased battery get completely drained on a concrete floor. And it was less than a days time. But I must say prior to that incident I have left batteries on the concrete for days with no drainage. So it must depend on the battery and or the concrete type. Kevin Fillinger No!

Can you put a battery on concrete?

Today however, the truth is that it is perfectly fine to place a battery directly on concrete. That's because today's battery cases are made of tough plastics such as polycarbonate or polypropylene for greater impact resistance. These plastics are strong and don't degrade the way hard rubber can.

Does putting a battery on a concrete surface cause self-discharge?

While placing a battery directly on a concrete surface doesn't cause self-discharge, when storing a battery, it is always a good idea to clean off dirt and grime from battery terminals and wipe off the top of the case. Accumulated grime could create a circuit between the terminals that could cause self-discharge.
