
London Mobile has more than 100 5G base stations

Does London have 4G & 5G?

Transport for London (TfL) continues to roll out 4G and 5G mobile coverage across London's underground network, allowing more passengers to enjoy mobile service while travelling on the tube. Mobile coverage on the Tube was initially trialled in March 2020 on sections of the Jubilee line, followed by a full rollout in December 2022.

How many mobile base stations are there in the UK?

The number of mobile base stations providing 5G services has more than doubled over the last year to over 6,500 sites across the UK - 87 percent of these are in England, 8 percent in Scotland, 3 percent in Wales and 2 percent Northern Ireland.

What is London Underground 5G?

The programme is operated by Boldyn Networks (previously known as BAI Communications) as part of a 20-year concession awarded by Transport for London. The programme entails full mobile connectivity throughout the London Underground by the end of 2024, including 5G connectivity at select stations.
