
Main points for attention when installing roof solar panels

How do I know if my roof is suitable for solar?

Before installing solar panels, assess your roof to ensure it is suitable for solar installation. Start by examining the roof's condition. It should be sturdy and have at least 10-15 years to function. If the roof is damaged, consider repairing or replacing it to avoid complications later.

Do I need a structural assessment before installing solar panels?

Before mounting solar panels, your roof must undergo a thorough structural assessment. Solar panels and mounting equipment add approximately 3-4 pounds per square foot of additional load to your roof structure. Key evaluation factors include: If your roof needs replacement, complete this work before solar installation.

Should you install solar panels on a roof?

Roofs come in many different shapes and sizes. Before you go ahead with any installation, make sure that your roof has enough space for the solar panels. If there isn't enough room, you likely will not get the return you expect on your investment. 3. Which direction do the slopes of your roof face?

How to install solar panels safely?

Safety is paramount when installing solar panels. Wear protective gear such as helmets, gloves and safety glasses to minimize risks. Clear obstructions, such as overhanging tree branches, to maximize efficiency. Wiring is an important step to ensure the functionality of your solar panels.
