# Make your own solar water pump

What is a DIY solar water pump?

A DIY solar water pump involves a simple build that combines solar panels, a controller, and a DC water pump in a stand-alone system. In short, the solar array generates DC electricity to power the water pump. With this system, you can also add a backup battery for continuous use throughout the night or on a cloudy day.

How to install a solar pump system?

Connect the Water output of the pump to a long pipe and ensure that it is secured properly. Lower the pump into the water source and switch it on.<sup>3</sup> The Solar Pump System controller is the brain of the entire project. It basically regulates the current supplied to the pump from the solar panels.

How to maintain a DIY solar water pump?

Maintaining a DIY solar water pump is vital to ensure its longevity and efficiency. Regular upkeep not only enhances performance but also prevents costly repairs. To begin with, routine checks are essential. It is advisable to inspect the entire system at least once a month.

How do I choose a solar water pump?

When embarking on a DIY solar water pump project, selecting the correct solar panel and pump size is crucial for ensuring optimal performance. The two primary components of your system are the solar panel, which converts sunlight into electrical energy, and the pump, which moves the water.
