## Micro inverter lifespan

How long do solar inverters last?

Solar inverters don't last forever, and knowing their lifespan can save you from surprise breakdowns. On average, they'll serve you well for a decade or more. The key is understanding what affects their durability and how to extend it so your solar system runs smoothly for years. [How Long Does a Solar Inverter Last?](#)

How long do micro-inverters last?

Micro-inverters last much longer than string inverters. In fact, they can last for about 30 to 40 years. This is why they have longer warranties. You can enjoy up to a 25-year warranty on micro-inverters. Not only that; many manufacturers will also extend the warranty for an additional cost. [5. Not limited by String Voltages](#)

How long does a string inverter last?

A typical centralized residential string inverter generally has a lifespan of 10 to 15 years, necessitating replacement during the solar panels' operational life, which can extend up to 25 to 30 years. Standard warranties for string inverters are between 5-10 years, with options to extend to 20 years.

Do solar inverters wear out?

Temperature: You might notice that various components in your solar power system have an optimum temperature range. The same is also true for inverters. Using the inverter in temperatures can cause it to wear out sooner than average, shortening its overall lifespan.

In general, solar inverters last anywhere from 10 to 25 years, depending on the type. String inverters, battery-based inverters, and hybrid inverters have an average lifespan of 10 years. ...
