
Nassau Solar Water Pump Installation

How do you design a solar water pumping system?

When designing a solar pumping system, the designer must match the individual components together. A solar water pumping system consists of three major components: the solar array, pump controller and electric water pump (motor and pump) as shown in Figure 1.

How to install a solar water pump?

For tip number three on solar water pump installation, focus on the correct orientation of panels. In the Southern Hemisphere, like in South Africa, aim the panels to face True North. Match the panel's angle to your location's latitude, which is easily searchable online. A 10-degree deviation is generally acceptable.

How do you install a solar fountain pump?

Whether you want to install your converted solar fountain pump or your water pump to fill up your water tank, each installation involves those three main steps and come with its own sub-step. For instance, you'll have to mount and assemble a stand for the solar array.

How to choose a solar water pumping system?

The type of solar water pumping system: borehole/well (submerged), floating or surface will depend on the water source. If the source is a borehole (proposed or existing) or deep well, then a submersible pump that fits the borehole or well should be selected. If the water source is a river, then a surface pump should usually be selected.

You're pumping water without paying a dime for electricity, your system runs itself, and you're helping the planet while you're at it. That's the magic of solar-powered water ...
