# New energy lithium iron phosphate battery pack

What are lithium iron phosphate battery stocks?

Lithium-based batteries, specifically lithium iron phosphate batteries (LFP batteries), have become popular for renewable energy storage and EV power. Lithium iron phosphate batteries are a favorite in the battery market, and as a result, investors are eager to get exposure to lithium iron phosphate battery stocks.

What are rechargeable lithium iron phosphate batteries?

Rechargeable lithium iron phosphate batteries are those that use  $\text{LiFePO}_4$  as the principle cathode material.

Are lithium iron phosphate batteries about to change the conversation?

Over the past decade, zillions of hours and billions of dollars have been invested in figuring out how to make solid-state lithium-ion batteries. Now it seems lithium iron phosphate (LFP) batteries may be about to change the conversation completely. One of the features of LFP batteries is they don't use cobalt.

Will lithium iron phosphate lower battery prices?

With lithium iron phosphate, which eliminates both nickel and cobalt, there is a possible pathway for getting battery prices down to as low as \$80/kWh. The whole world is watching and waiting for Tesla Battery Day, now tentatively scheduled for September 15.
