## Solar panel angle

What is the optimum tilt angle for solar panels?

The optimum tilt angle is calculated by adding 15 degrees to your latitude during winter, and subtracting 15 degrees from your latitude during summer. For instance, if your latitude is  $34^\circ$ , the optimum tilt angle for your solar panels during winter will be  $34 + 15 = 49^\circ$ . The summer optimum tilt angle on the other hand will be  $34 - 15 = 19^\circ$ .

What is a solar panel angle?

A solar panel angle, also called the tilt angle, is how much a solar panel is slanted compared to flat ground. If the panel lies completely flat, the angle is zero degrees. As you lift the top edge higher, the angle increases. When the panel is standing straight up like a wall, the angle is ninety degrees.
