
Solar panels transported on the factory roof

Can solar panels be installed on a factory roof?

The roofs of factories are often the ideal place to install solar panels. As factories are energy-intensive buildings, installing a solar PV system on the roof of a factory ensures free power can be generated to run everything underneath it.

How do solar panels work on a factory roof?

Sunlight Absorption Solar panels on the factory roof capture sunlight. Through the photovoltaic effect, solar cells convert light into direct current (DC) electricity. DC Generation This raw DC power is collected and channeled via cables into the inverter system. The energy output depends on the sunlight intensity and panel efficiency.

Should we cover unused factory roofs with solar panels?

Decarbonising our supply chain: Covering unused factory roofs with solar panels helps suppliers cut emissions and costs. In some production countries, even though suppliers are coupled to the grid, electricity supply can be unreliable, costly and powered by fossil fuels.

Does industrial roofing use solar power?

Industrial roofing is increasingly turning to solar power, fitting expansive rooftops with photovoltaic panels. In fact, the use of solar energy in commercial and industrial buildings has grown around 7% annually over the past decade .
