
Supercapacitor and ordinary capacitor price

How much does a supercapacitor cost?

The capex costs of supercapacitors are contrasted with the costs of lithium ion batteries and the costs of flywheels in the chart below. A typical supercapacitor stores about 15 seconds of energy, for a capex cost of \$10,000/kWh, but just \$40/kW of power.

How much does a capacitor cost?

The average price of a capacitor can range from \$10 to \$400 or more, depending on its type and purpose, so stay tuned for a deeper dive into understanding the true value of capacitors. Capacitor prices exhibit a wide range, primarily influenced by the capacitor's material, capacitance, voltage rating, and intended application.

How much energy does a supercapacitor store?

A typical supercapacitor stores about 15 seconds of energy, for a capex cost of \$10,000/kWh, but just \$40/kW of power. This is down to very high power density (10-25 kW/kg, 10-25x higher than a lithium ion battery), albeit quite low energy density (2-10 Wh/kg, which is 95-99% below a lithium ion battery).

Supercapacitors store energy electrostatically, as electrical charge builds up on two plates, made of material such as activated carbon or graphene, which is disposed on either ...
