What is a ground fault circuit interrupter (GFCI)?

A Ground-Fault Circuit Interrupter (GFCI) is a safety device designed to protect people from electrical shock by monitoring the electrical current flowing through a circuit. It detects imbalances between the hot and neutral wires, which can indicate a ground fault where electricity is leaking out of the circuit.

What is the difference between a GFCI and a single-pole circuit breaker?

Keep in mind that the difference between single-pole and two-pole normal circuit breakers and a GFCI is that there is a built-in white wire on the backside of the GFCI, and it must be connected to the neutral busbar in the main supply, or it will not work and protect the circuit properly.

Where can I buy GFCI breakers?

GFI WAREHOUSE is the leading wholesale supplier of GFCI Breakers. They offer bulk discounts on Siemens QF220 as low as \$59.99 and have a large inventory for fast delivery. Free shipping on all breaker orders over 60 pieces - Continental US Only. Contact 0 item(s) - \$0.00 for more information in your home shop.

How do I wire a 20A 120V GFCI breaker?

The same wiring configuration can be applied to a 20A, 120V circuit by using the correct wire size, an appropriately rated circuit breaker, and properly rated switches and outlets. As shown in the figure below, this includes wiring a 2-pole, 20A-120V GFCI breaker with a 20A-120V outlet (NEMA 5-20R).
