## Wholesale gfci breaker wiring in Slovakia

What is a ground fault circuit interrupter (GFCI)?

A Ground-Fault Circuit Interrupter (GFCI) is a safety device designed to protect people from electrical shock by monitoring the electrical current flowing through a circuit. It detects imbalances between the hot and neutral wires, which can indicate a ground fault where electricity is leaking out of the circuit.

Where can I buy GFCI breakers?

GFI WAREHOUSE is the leading wholesale supplier of GFCI Breakers. They offer bulk discounts on Siemens QF220 as low as \$59.99 and have a large inventory for fast delivery. Free shipping on all breaker orders over 60 pieces - Continental US Only. Contact 0 item(s) - \$0.00 for more information in your home shop.

What is the difference between a GFCI and a single-pole circuit breaker?

Keep in mind that the difference between single-pole and two-pole normal circuit breakers and a GFCI is that there is a built-in white wire on the backside of the GFCI, and it must be connected to the neutral busbar in the main supply, or it will not work and protect the circuit properly.

How do you wire a GFCI breaker?

Similar to the wiring diagram for a 1-pole GFCI circuit breaker, the built-in white wire on the back of the two-pole GFCI must be connected to the neutral bar in the main panel. The 2-pole GFCI should be installed in the two hot slots in the main panel. This configuration allows HOT 1 and HOT 2 to provide the 240V input supply to the GFCI.
