
Wholesale substation breaker in Us

What are substation circuit breakers & reclosers?

Substation circuit breakers and reclosers are considered critical assets, given their important role in network protection. They are used in the network to open and close (i.e. switch) an electrical circuit under normal and fault conditions, providing safe operational control.

How does a substation work?

Substations receive electricity from a transmission line and reduces it to distribution voltage. In the case of a generation facility the opposite occurs - voltage is increased. Substations need to be robust, built with products that last. We offer a complete line of high quality substation equipment that meets or exceeds industry standards.
